LUMI SYSTEM

Meet LUMI - a loft style door and glazing system. Provides additional light, creates separate zones, gives character. Functional and decorative internal glazing, adapted to the individual design. Acting as a divider or space separation into separate zones without restricting light. An aluminium structure in matt black or natural anode, filled with glass (transparent, frosted, coloured, reinforced) or furniture board, optically enlarges the interior and provides additional light and soundproofing.

The LUMI system is an excellent solution for those who want to create a unique and modern look in their interior design. The loft-style door and glazing system is not only functional but also decorative, adding character and style to any space. With a choice of different materials and colors, it can be easily adapted to individual design preferences, making it a versatile and customizable option for any home or office.

Glazed hinged doors

LUMI hinged doors, both single and double, can be combined with side panels or top lights made of the same profile. This creates a spacious, light-looking and spectacular glazing in the French style. It can be used to separate rooms or create zones with different purposes inside. Such a solution will work well in high-rise buildings as well as in public places.

Hinged doors can be made of furniture board, glass or a combination of both fillings. To maintain consistency of the structure, tilt panels have specially designed handles in three lengths and a matching handle dedicated to the style. In the case of high walls, to stiffen the structure, it is recommended to make at least one horizontal division in panels higher than 2 meters.

Glazed doors with a suspended system

Single or double glazed doors with the LUMI system, filled with glass or board, can be combined with side fixed panels and showcases made from the same profile. Both the doors and fixed panels, divided by characteristic vertical or horizontal bars, gain a bold, industrial look, creating an original design element and unconventional communication pathways inside spaces. Depending on the color of the profiles, LUMI creates a unique, transparent partition in a loft style or a glass wall in a French style.

Walls with such a specific character will work well when dividing the interior, separating the living room from the bedroom area, creating a stylish wardrobe or a home office. A glass wall with a loft edge or French elegance is a proposal for modern, minimalist, Scandinavian interiors, as well as for the arrangement of industrial facilities.

Glazing Screens

Glass panels in characteristic but simple frames are a way to create a fresh and unconventional room arrangement. Combined with suspended or tilt doors, but also as independent elements, they create high or low partition walls. This allows for the creation of a bright, spacious interior filled with light and glass reflections. Glazings in aluminum frames in natural anodized or matte black color will work perfectly as an independent construction that subtly separates functional areas in the room. Lumi glass screens, in the version with interestingly arranged mullions, are also an additional, decorative element that visually enlarges the interior and gives it a unique style and character.

Doors in frame

Glazed, hinged doors in an aluminum frame are an advantage appreciated by lovers of industrial and modern style. The simplicity of the door leaf with a handle or knob, the possibility of using muntins, the timeless natural anodized color and matte black are the undeniable advantages of this solution. A wide range of patterns, the possibility of many horizontal and vertical muntin combinations within the leaf, the use of various glass, mirror or panel fillings make LUMI doors adaptable to any interior requirements and character. What makes LUMI doors unique and very versatile is also the availability of a right- or left-hand version and two types of frames: fixed or width-adjustable.

ORTO SYSTEM

Looking for a way to upgrade your storage solutions and interior design? Look no further than our ORTO system, one of our most popular and aesthetically pleasing products, providing an ideal foundation for shelves, drawers, cabinets, and hanger rods. The minimalist design of this versatile column system will help you transform your house into a welcoming and functional home.

By incorporating the ORTO system into your closets, kitchens, bookcases, or any other storage solutions, you'll enjoy its unparalleled functionality and contemporary look. It's time to take your interior design to the next level with ORTO SYSTEM.

OPAL SYSTEM

The OPAL system is an innovative solution that allows for the creation of furniture fronts that are both functional and visually appealing. Its versatility makes it suitable for various applications, such as hinged doors, gas-operated upward tilting doors, and drawer fronts. The system's ability to incorporate several colors of glass panels in one front adds an interesting and modern design element to any furniture piece.

In addition to the variety of glass panel colors, the OPAL system also offers a choice of 10 different frame profile handles for fronts in various suspended and standing cabinets. This feature allows for even more customization options, making it possible to create furniture pieces that are perfectly tailored to individual preferences and needs.

Overall, the OPAL system is a high-quality and flexible solution for creating furniture fronts that meet both functional and aesthetic requirements. Its availability in four different colors, Anode Black, Anode Graphite, Anode Natural, and White, provides even more options for creating furniture pieces that fit seamlessly into any interior design scheme.

In addition to the mentioned advantages of the OPAL system, it is also worth emphasizing that its use allows for time savings and increased work efficiency in the furniture production process. Thanks to precise dimensions and customization options, furniture equipped with the OPAL system is easier to assemble and minimizes the risk of errors.

The OPAL system is one of many innovative solutions introduced by the company Komandor, which is known for producing high-quality custom-made furniture and sliding door systems for wardrobes and closets. Through continuous work on development and the introduction of new products, Komandor enables customers to create furniture that is not only functional but also aesthetic and in line with the latest trends in the furniture industry.
