Aurora glazing system for office buildouts

Aurora glazing system for medical and dental offices

The Aurora partition system allows you to divide a large open space into rooms, corridors or office space by building walls out of aluminum and glass. A favored product by architects, Aurora allows the creation of these partitions walls while maintaining privacy and light transmission.

This system provides a custom solution that is cost effective because there is no need to frame or drywall additional bulkheads or walls in preparation for installation. The panels are manufactured in our factory and simply fastened to each other and structurally secured within the room. The process is quick and easy.

Single glazed TAW-1 system

Double glazed TAW-2 system

The TAW-1 glazing system allows the partitioning of spaces without the need for heavy aluminum frames. Spaces can maintain privacy and light transmission if necessary through use of different types of tempered or laminated safety glass.

The TAW-2 glazing system is a double glaze version of TAW-1 and offers a higher level of acoustic deadening.

LUMI glass wall and door system

## LUMI Glazing System

**Swing | Fixed Panels**  
**Sliding | Screens|**  
**Corner Posts**

Clean lines and a design forward aesthetic differentiate any office space from the crowd with LUMI Heavy. Elevate the workspace and make a statement with these bespoke partitions.

LUMI is an aluminum framed interior glazing system that can be fitted in different configurations and accepts a host of insert material: clear and frosted glass, architectural glass, panel, mirror and more.

LUMI glass wall, sliding, and swing
